EDUCATION

Bachelor of Science in Computer Science, Minor in Data Science <i>Western University</i> – Recipient of the Carmeta Thelma Hodges Scholarship Award (\$6000 CAD) and Western Admission Scholarship (\$2500 CAD)	Sep. 2024 – May 2028 <i>London, ON</i>
High School Diploma <i>Gems American Academy</i> High Honours, Male Athlete of the Year (Basketball MVP)	Aug. 2023 – May 2024 <i>Doha, Qatar</i>

EXPERIENCE

AI & Software Developer Intern <i>PurelyBiome</i> – Trained and tuned multi-task Convolutional Neural Networks (CNNs) using PyTorch/TensorFlow , optimizing model hyper-parameters to achieve 94% classification accuracy in detecting complex dermatological features – Developed the end-to-end customer reporting interface using Next.js and Supabase , building dynamic visualizations to translate complex biological JSON data into actionable microbiome insights.	May 2026 – Present <i>Remote</i>
Facilities Asset Management Intern <i>RCCG HOP</i> – Digitized and inputted detailed data on up to 50 key church assets into the Upkeep CMMS to support accurate maintenance tracking and recordkeeping. – Digitalized and organized church maintenance records, including plumbing, electrical, and audiovisual system maps, using Microsoft Office Suite (Word, Excel, and OneDrive) for streamlined access and documentation.	Jun. 2022 – Aug. 2022 <i>Calgary, AB</i>
Projects Director <i>Western Founders Network</i> – Collaborated on developing full stack applications using technologies such as Node, React , Express, Supabase , and GitHub, applying real-world practices such as API Integration, version control, and feature deployment.	Sep. 2025 – Present <i>London, ON</i>

PROJECTS

Distributed URL Shortener Devpost GitHub <i>Flask, Docker, Nginx, Neon</i> – Architected a highly available web application on DigitalOcean, containerizing an Nginx reverse proxy, Redis cache, and Python backend with Docker to ensure clean separation of concerns. – Optimized system throughput to support 500 concurrent users by tuning Gunicorn thread workers and implementing PgBouncer connection pooling for PostgreSQL, sustaining 520+ requests per second with a 0% error rate.	Apr. 2026
UofTHacks: Flowlytics Devpost GitHub <i>Python, Mesa, TypeScript, React</i> – Built a customer traffic simulation and analytics dashboard by integrating a Python-based Mesa model with a React/TypeScript frontend, providing real-time space utilization metrics for retail environments. – Spearheaded spatial data analysis by writing Python scripts to simulate foot traffic and generate heat maps, processing 10,000+ simulated agent movements to identify store dead zones within a 48-hour hackathon window.	Jan. 2026
Mustang Wrapped Video GitHub <i>Spotify API, Supabase, React, SQL</i> – Developed a full-stack social analytics web application by integrating the Spotify Web API with a React frontend and Supabase backend, securely normalizing and storing real-time user listening history. – Uncovered community-level music trends by writing complex SQL queries to clean, aggregate, and normalize raw JSON data, successfully processing over 100 top tracks among university club members to deliver personalized comparative dashboards.	Oct. 2025 - Present

TECHNICAL SKILLS

Languages and Frameworks: Python, **JavaScript**, **PostgreSQL**, Java, HTML/CSS, R, C, React, **Next.js**, Express.js, Flask
Developer Tools: Git, GitHub, **Docker**, **Nginx**, **Supabase**, VS Code, Figma, Notion
Libraries: **PyTorch**, **TensorFlow**, Keras, NumPy, Matplotlib, Seaborn
Other Skills: Computer Vision, Arabic, Event Management, Sound Engineering, **Microsoft Office Suite**
