EDUCATION

Bachelor of Science in Computer Science, Minor in Data Science Sep. 2024 – May 2028
Western University *London, ON*
– Recipient of the Carmeta Thelma Hodges Scholarship Award (\$6000 CAD) and Western Admission Scholarship (\$2500 CAD)

EXPERIENCE

AI & Software Developer Intern May 2026 – Present
PurelyBiome *Remote*
– Built a computer vision pipeline to grade acne severity from user facial images, fine-tuning an EfficientNet CNN in PyTorch/TensorFlow with a two-phase transfer-learning strategy to reach 95.5% validation accuracy and 100% accuracy on a held-out set of 50 real customer images.
– Engineered the end-to-end customer reporting interface in Next.js and Supabase, building dynamic visualizations that translate complex biological JSON data into actionable microbiome insights for users.

Software Developer Jun. 2026 – Present
3D Western *London, ON*
– Built the frontend data and API layer for a 3D-printing lab management dashboard (Next.js, TypeScript, React) launching to production in August 2026, delivering typed contracts and API client wrappers across booking and job-tracking features.
– Implemented an equipment booking system spanning ~9 REST endpoints (availability, create, cancel, admin override, capacity, and approval requests) with server-side conflict and capacity handling, plus a job-tracking layer surfacing ETA, pickup, and status history across 4 job types.
– Developed against a Mock Service Worker (MSW) layer to build and test data flows in parallel with the backend team, added unit and end-to-end tests, and wired reusable hooks into the UI to eliminate duplicate fetch logic.

Vice President of Projects Sep. 2025 – Present
Western Founders Network *London, ON*
– Promoted from Projects Director to VP of Projects (Apr. 2026); design and run a technical curriculum (VS Code, Git/GitHub, JavaScript, project architecture) that onboards student builders from setup to a functioning full-stack prototype.
– Coordinate a team of directors through a sprint-based build cycle toward Demo Day showcases, providing hands-on mentorship on version control, API integration, and shipping working software.

PROJECTS

Internship Alert Pipeline | [GitHub](#) | *Python, GitHub Actions, REST APIs* Jul. 2026
– Built an automated job-monitoring pipeline that aggregates ~720 postings per run across 5 sources, normalizes and deduplicates them by URL, and routes new/reopened roles through a 3-tier classifier by target company and location.
– Deployed on a 15-minute GitHub Actions cron with committed state for reliable change detection, delivering filtered alerts through push notifications and email with fuzzy company matching to avoid missed or duplicate roles.

Distributed URL Shortener | [Devpost](#) | [GitHub](#) | *Flask, Docker, Nginx, Redis* Apr. 2026
– Architected a highly available web application on DigitalOcean, containerizing an Nginx reverse proxy, Redis cache, and Python backend with Docker to ensure clean separation of concerns.
– Optimized system throughput to support 500 concurrent users by tuning Gunicorn thread workers and implementing PgBouncer connection pooling for PostgreSQL, sustaining 520+ requests per second with a 0% error rate.

Mustang Wrapped | [Video](#) | [GitHub](#) | *Spotify API, Supabase, React, SQL* Oct. 2025 – Present
– Developed a full-stack social analytics web application by integrating the Spotify Web API with a React frontend and Supabase backend, securely normalizing and storing real-time user listening history.
– Uncovered community-level music trends by writing complex SQL queries to clean, aggregate, and normalize raw JSON data, processing over 100 top tracks among university club members to deliver personalized comparative dashboards.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL (PostgreSQL), Java, R, C, HTML/CSS

Frameworks: React, Next.js, Express.js, Flask, Tailwind CSS

Developer Tools: Git, GitHub, GitHub Actions (CI/CD), Docker, Nginx, Supabase, REST APIs, MSW, Figma

Libraries & Concepts: PyTorch, TensorFlow, Keras, NumPy, Pandas, Computer Vision, API Integration
