EDUCATION

Bachelor of Science in Computer Science, Minor in Data Science <i>Western University</i> – Recipient of the Carmeta Thelma Hodges Scholarship Award (\$6000 CAD) and Western Admission Scholarship (\$2500 CAD)	Sep. 2024 – May 2028 <i>London, ON</i>
High School Diploma <i>Gems American Academy</i> High Honours, Male Athlete of the Year (Basketball MVP)	Aug. 2023 – May 2024 <i>Doha, Qatar</i>

EXPERIENCE

Technical Co-Founder <i>Ableo Solutions</i> – Architected a multi-page agency web app using React.js, Vite, and React Router to market AI solutions. – Integrated the Chatbase REST API via asynchronous fetch for real-time, interactive AI product demos. – Managed CI/CD and deployment via GitHub and Vercel, configuring custom DNS and SSL certification.	Jan. 2026 – Present <i>London, ON</i>
Projects Director <i>Western Founders Network</i> – Collaborated on developing full stack applications using technologies such as Node, React, Express, Supabase, and GitHub, applying real-world practices such as API Integration, version control, and feature deployment.	Sep. 2025 – Present <i>London, ON</i>
Facilities Asset Management Intern <i>RCCG HOP</i> – Digitized and inputted detailed data on up to 50 key church assets into the Upkeep CMMS to support accurate maintenance tracking and recordkeeping. – Digitalized and organized church maintenance records, including plumbing, electrical, and audiovisual system maps, using Microsoft Office Suite (Word, Excel, and OneDrive) for streamlined access and documentation.	Jun. 2022 – Aug. 2022 <i>Calgary, AB</i>
Marketing Director <i>Western Engineering AutoPilot</i> – Worked in WEAP's Communications Team to ensure a clear, consistent, and engaging brand voice across all digital platforms while spearheading design and social outreach initiatives for effective promotion.	Sep. 2025 – Present <i>London, ON</i>

PROJECTS

Distributed URL Shortener (MLH Hackathon) <i>Flask, Docker, Nginx, Oracle Cloud, Neon</i> – Architected a highly available web application on DigitalOcean, containerizing an Nginx reverse proxy, Redis cache, and Python backend with Docker to ensure clean separation of concerns . – Optimized system throughput to support 500 concurrent users by tuning Gunicorn thread workers and implementing PgBouncer connection pooling for PostgreSQL, sustaining 520+ requests per second with a 0% error rate	Apr. 2026
UofTHacks: Flowlytics <i>Python, Mesa, TypeScript, React, Gemini API</i> – Conducted data analysis using Python to simulate customer traffic and generate heat maps, successfully identifying densely populated areas and store "dead zones"	Jan. 2026
Mustang Wrapped <i>Spotify API, Supabase, React, SQL, Figma</i> – Worked in a team of 4 to develop a full stack data driven social platform web app by integrating the Spotify Web API with a Supabase backend to normalize and store real-time user listening history – Developed comparative analytics by writing complex SQL queries to clean, aggregate, and normalize raw real-time user data from the Spotify API. Uncovered community-level music trends and insights, allowing users to visualize and compare their tastes	Oct. 2025 - Present

TECHNICAL SKILLS

Languages and Frameworks: Python, **JavaScript**, **PostgreSQL**, Java, HTML/CSS, R, C, React, Express.js, Flask
Developer Tools: Git, GitHub, **Docker**, **Nginx**, **Oracle Cloud**, VS Code, Figma, Notion
Libraries: NumPy, Matplotlib, Seaborn
Other Skills: Arabic, Event Management, Sound Engineering, **Microsoft Office Suite**
